

CHENATH PERERA

Kalutara, Sri Lanka • chenathperera@gmail.com • +94 770 519 462 • [LinkedIn](#) • [GitHub](#)

Information Technology undergraduate at SLIIT specializing in Software Engineering with a strong interest in full-stack web development and frontend design. Experienced in building scalable, user-focused web applications using the MERN stack and designing clean, intuitive interfaces with Figma. Skilled in microservices and MVC architecture with hands-on experience across academic and personal projects. A collaborative team player with strong problem-solving abilities and a drive for continuous learning.

TECHNICAL SKILLS

Programming Languages: JavaScript, Java, Kotlin (Beginner), Python (Beginner)

Web Development: HTML, CSS, Tailwind CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Vite

Databases: MongoDB, MySQL

Tools & Technologies: Git & GitHub, Figma, VS Code, Postman, Android Studio, Docker

Architecture: MVC Architecture, Microservices Architecture

Development Practices: REST API Design, JWT Authentication, Agile Methodology, Version Control

PROFESSIONAL SKILLS

Teamwork & Collaboration • Problem-Solving • Fast Learner & Adaptability • Communication • Time Management • Leadership Qualities

PROJECTS

iDoc — AI-Enabled Smart Healthcare Platform

March 2026 - Apr 2026

Role: Backend Developer – Doctor Module & AI Service (Academic Team Project) | Technologies: React, Node.js, Express.js, MongoDB, Docker, Stripe, OpenRouter API, Micro-Service Architecture

A cloud-native healthcare platform with a gateway-centric microservices architecture enabling appointment booking, telemedicine, online payments, and AI-assisted symptom guidance.

- Developed and managed the Doctor Service including registration, approval workflow, profile management, appointment handling, and digital prescription issuance
- Integrated an AI Symptoms Service using the OpenRouter API to provide preliminary symptom analysis with medical specialty suggestions
- Implemented role-based access control for Admin, Doctor, and Patient roles with JWT authentication
- Contributed to Dockerized multi-service deployment using Docker Compose

DropMe — Smart Carpooling & Public Transport Platform

Jan 2026 - Apr 2026

Role: Full Stack Developer – Train Booking Module (Academic Team Project) | Technologies: React, Vite, Node.js, Express.js, MongoDB, Leaflet, Stripe, Socket.IO

A full-stack MERN mobility application combining carpooling, train ticket booking, bus scheduling, and eco-friendly travel tracking, deployed on Vercel and Render.

- Built the complete train ticket booking flow — station search, schedule browsing, seat booking, ticket download, and admin verification
- Integrated Leaflet maps for nearest station lookup and real-time location features
- Implemented Stripe payment gateway for transport ticket purchases

Virtual Try-On E-Commerce System

Nov 2025 - Jan 2025

Role: Full Stack Developer (Personal Project) | Technologies: React, Node.js, Express.js, MongoDB, Google Gemini AI, Cloudinary, Stripe

A full-stack fashion e-commerce platform with an AI-powered virtual fitting room allowing shoppers to preview garments on their own photo before purchase.

- Built the virtual try-on feature using Google Generative AI to composite uploaded user photos with selected product clothing images
- Developed a complete storefront (catalog, cart, checkout) alongside a secure admin dashboard for product and order management
- Integrated Cloudinary for image storage and Stripe Checkout for online payments

PairPix — AI Image Generator

Oct 2025 - Nov 2025

Role: Full Stack Developer (Personal Project) | Technologies: React, Node.js, Express.js, MongoDB, Pollinations.ai, Stable Horde, JWT

A full-stack AI image generation platform with a user app, REST API backend, and admin panel for managing style templates.

- Implemented text-to-image generation (1024×1024) via Pollinations.ai and image-to-image transformation via Stable Horde GPU network
- Designed a credit-based system, generation history, style gallery by category, and admin style management panel
- Built JWT authentication, asynchronous job polling, and content filtering into the API layer

WellNest — Wellness & Habit Tracking Android App

Oct 2025

Role: Android Developer (Academic Project) | Technologies: Kotlin, Android Studio, Material 3, WorkManager, Jetpack Navigation, SharedPreferences

A comprehensive Android wellness companion app built with clean architecture principles combining habit tracking, mood journaling, and hydration reminders.

- Built a daily habit tracker with CRUD operations, visual completion donut progress, and swipe-to-delete gesture support
- Developed a mood journal with emoji quick-add, historical trend view, custom bar chart analytics, and 7-day summary sharing
- Implemented hydration reminders using WorkManager and AlarmManager, persisting across device reboots
- Added a home-screen widget, Light/Dark/System theme switching (Material 3), and JSON-based data import/export

EDUCATION

Sri Lanka Institute of Information Technology (SLIIT)

Nov 2023 - Present

BSc (Hons) in Information Technology – Specializing in Software Engineering

- CGPA: 3.54 out of 4.00

Wadduwa Central College, Wadduwa

2011 - 2022

- GCE Advanced Level – Mathematics Stream
- GCE Ordinary Level

INTERESTS

Mobile Application Development • Software Development • Full Stack Developments • Web Development • UI Designing and Development
